You need to have the ability and skills to create APIs to redeem automatically Amazon gift cards. The script will run on cloud instances and need to handle these scenarios:

1. Login to amazon,
2. Redeem gift card codes,
3. Scrape amazon results
4. Handle additional amazon requirements as re-login required, enter zip code, phone number, etc.
4. Get a results list

Here is a similar app in the market that you can figure out.
https://zinc.io/docs/#giftcards   > piranha.zinc.io

Project Challenge:

1. Create an API to collect the Amazon account information.

2. Create an API to redeem gift card codes automatically in an amazon account. (show the full amazon response to understand if the code is redeemed or not)

Quick-Apply Code

Retailer Account

[⬍]

[Apply Code Now]

3. Create an API to display the redeemed codes, you need to tag "valid" codes and "error" codes

Used Codes

Code	Date Used	Account Used	Balance Before	Balance After	Change

4. Create an API to clean the DB and start again.

5. Create an amazon acc based in USA to test it, we can send you some GC codes to test it.

6. At the end, please provide us the APIs of the project to test it.

Thanks.
